CS 302

Project 6

10/15/15

1. What worked best with this assignment was the exposure to binary search trees and the way they work.
2. When I first started working on this project, I was a bit confused on how to make the functions recursive. However, then I realized I had to make supporting functions for each function.
3. When it came to the copy function, I did not understand how recursive part of the function worked.
4. In the end of the project, I learned about binary trees and got a lot more practice with recursive functions.
